

Infrared Cirrus and Future Space Based Astronomy

T. N. Gautier (Jet Propulsion Laboratory)

A review of the known properties of the distribution of infrared cirrus is followed by a discussion of the implications of cirrus on observations from space. Probable limitations on space observations due to infrared cirrus "seeing" are outlined and scientific observations of the cirrus itself are discussed.

Abstract submitted for *The First Symposium on the Infrared Cirrus and Diffuse Interstellar Clouds*, 7 - 9 April 1993, Tucson, Arizona
